

3.2.P.5.1 Specification

3.2.P.5.1 Specification (5mg Tablets)

3.2.P.5.1.1 Release Specification for Efpiate Tablets

Test	Acceptance Criteria
Appearance	Blue-green modified capsule-shaped film-coated tablet engraved with "EF-123" on one side.
Identification of efpiate by HPLC	The retention times of the major peaks in the chromatogram of the sample correspond with those produced by the efpiate reference standards.
Identification Tests for Colorants ¹ Titanium Iron	Positive Positive
Assay by HPLC Efpiate Content	4.95 – 5.05 mg/tablet 95.0 – 105.0% Label Claim
Dissolution by UV	Complies with current USP Q value of 80 at 30 minutes
Uniformity of Content by UV	Complies with the requirements of current PhEur
Microbial Limit Tests ¹ Total Viable Aerobic Count Total Yeast and Mold Count	Not more than 1000 cfu/g Not more than 100 cfu/g

Note:

1. Not routinely tested.

3.2.P.5.1 Specification

3.2.P.5.1.2 Shelf-life Specification for Efpiate Tablets

Test	Acceptance Criteria
Appearance	Blue-green modified capsule-shaped film-coated tablet engraved with "EF-123" on one side.
Identification of efpiate by HPLC	The retention times of the major peaks in the chromatogram of the sample correspond with those produced by the efpiate reference standards.
Identification Tests for Colorants Titanium Iron	Positive Positive
Assay by HPLC Efpiate Content	4.95.0 – 5.05 mg/tablet 95.0 – 105.0% Label Claim
Drug-related Impurities by HPLC ¹ EF24003 Content ² Any Unspecified Impurity ^{3,4} Total Efpiate Related Impurities ³ Dissolution by UV	Not more than 0.5% area Not more than 0.2% area Not more than 1.0% area Complies with current USP Q value of 80 at 30 minutes
Uniformity of Content by UV Efpiate	Complies with the requirements of current PhEur
Microbial Limit Tests Total Viable Aerobic Count Total Yeast and Mold Count	Not more than 1000 cfu/g Not more than 100 cfu/g

Note:

- Structures are provided in Module 3.2.P.5.3
- Based on efpiate total related peak areas.
- Does not include drug substance process impurities, except thymine and 12345, which are controlled in the Total Efpiate-related Impurities.
- Percent area of any known unspecified impurity is based on the respective total related active peak areas. Percent area for any unknown is based on total efpiate-related peak areas.
