1. General Information [Mysubstance, Mymanufacturer]

Information from 3.2.S.1 section of Module 3 should be included here.

2. Manufacture [Mysubstance, Mymanufacturer]

Information from section 3.2.S.2 of Module 3 that should be provided includes:

Information on the manufacturer:

- A brief description of the manufacturing process (including, for example, reference to starting materials, critical steps, and reprocessing) and the controls that are intended to result in the routine and consistent production of materials of appropriate quality
- A flow diagram, as provided in 3.2.S.2.2 of Module 3, should be imported directly
- A description of the source and starting material and raw materials of biological origin used in the manufacture of the drug substance, as described in 3.2.S.2.3 of Module 3.
- A discussion of the selection and justification of critical manufacturing steps, process controls, and acceptance criteria. Highlight critical process intermediates, as described in 3.2.S.2.4 of Module 3
- A description of process validation and/ or evaluation, as described in 3.2.S.2.5 of Module 3
- A brief summary of major manufacturing changes made throughout development and conclusions from the assessment used to evaluate product consistency, as described in 3.2.S.2.6 of Module 3. The QOS should also cross- reference the nonclinical and clinical studies that used batches affected by these manufacturing changes, as provided in the M4S and M4E sections of the application.

3. Characterization [Mysubstance, Mymanufacturer]

For New Chemical Entities (NCE):

A summary of the interpretation of evidence of structure and isomerism, as described in 3.2.S.3.1, should be included.

When a drug substance is chiral, please specify whether specific stereoisomers or a mixture of stereoisomers have been used in the nonclinical and clinical studies, and information should be given as to the stereoisomer of the drug substance that is to be used in the final product intended for marketing.

For Biotech:

A description of the desired product and product- related substances and a summary of general properties, characteristic features, and characterization data (for example, primary and higher order structure and biological activity), as described in 3.2.S.3.1, should be included.

For NCE and Biotech:

The QOS should summarize the data on potential and actual impurities arising from the synthesis, manufacture, and/ or degradation and should summarize the basis for setting the acceptance criteria for individual and total impurities. The QOS should also summarize the impurity levels in batches of the drug substance used in the nonclinical studies, in the clinical trials, and in typical batches manufactured by the proposed commercial process. The QOS should state how the proposed impurity limits are qualified.

A tabulated summary of the data provided in 3.2.S.3.2, with graphic representation where appropriate, should be imported directly.

4. Control of Drug Substance [Mysubstance, Mymanufacturer]

A brief summary of the justification of the specifications, the analytical procedures, and validation should be included.

Specification from 3.2.S.4.1 of Module 3 should be imported directly.

A tabulated summary of the batch analyses from 3.2.S.4.4, with graphic representation where appropriate, should be imported directly.

5. Reference Standards or Materials [Mysubstance, Mymanufacturer]

Information from 3.2.S.5 of Module 3 (tabulated presentation, where appropriate) should be included.

6. Container Closure System [Mysubstance, Mymanufacturer]

A brief description and discussion of the information from 3.2.S.6 of Module 3 should be included.

7. Stability [Mysubstance, Mymanufacturer]

This section should include a summary of the studies undertaken (conditions, batches, analytical procedures) and a brief discussion of the results and conclusions, the proposed storage conditions, and the retest date or shelf life, where relevant, as described in 3.2.S. 7.1.

The postapproval stability protocol, as described in 3.2.S.7.2 of Module 3, should be included.

A tabulated summary of the stability results from 3.2.S.7.3 of Module 3, with graphic representation where appropriate, should be imported directly.

Note: A separate section 2.3.S should be provided for each drug substance. For example, for a second substance, the sections would be labeled 2.3.S [name 2, manufacturer]. For a substance coming from another manufacturer, the sections would be labeled 2.3.S [name, manufacturer 2].
